## Flex.Gate 'Easy'

Flexible, long-lasting, practical

When it comes to efficiency at a fair price, the Flex.Gate 'Easy' is the perfect investment. It offers reliable access control with all the necessary functionality and versatility in proven SKIDATA quality.

### Flexible and reliable

Adjusting the Flex.Gate 'Easy' to the current snow depth - when the flakes are heavily falling from the sky - can be done with just one person and a wrench very quickly. Its durability lets it stand up to even the harshest weather conditions. This long-term usability saves you money.

### Stylish in design, practical in detail

The minimalist design makes the Flex.Gate 'Easy' a real eye-catcher. SKIDATA also pays attention to well-conceived details. Thanks to the recessed handle in the antenna, snowboarders and skiers alike are able to pass smoothly and quickly through the turnstile.

### Clever and comfortable technology

Thanks to the use of new technology in the long-range antenna, RFID data carriers are read even faster. During operation, the antennas adjust automatically without the need for action from the operator. This saves time and increases throughput, letting winter sports enthusiasts pass through the ticket control quickly and comfortably.

### Attractive price/performance ratio

Do you place a high priority on carefully selected, practical functionality and meticulous workmanship at a fair price? Then with Flex.Gate 'Easy' you will be well prepared for a successful season. The reliable and cost-efficient access system is perfectly designed to meet your needs.
