

Handshake.Logic 'People Counter'

for Handshake.Logic

The Handshake.Logic 'People Counter' reliably counts the number of your visitors without interrupting the flow of movement caused by a physical barrier. The People Counter consists of a stereo camera system which enables a high-precision analysis of the movement of people in specific areas, such as entrances, exits and transit areas.

- ✓ Counting of individuals without the need for a physical barrier, therefore maintaining the people flow
- ✓ Integration into the existing software solution Handshake.Logic eliminates the need for additional system/maintenance costs
- ✓ Data basis for a wide range of diverse analysis, for example, for selectively controlling the flow of people within an area, better utilization planning of specific attractions, calculation of the average revenue per user at sales points / shops, optimization of opening times, product placement and advertising, etc.

Functions

- Counting of persons without use of a physical barrier
- Children and baby carriages can be excluded from counts
- Person counting in entry and exit directions, including bi-directional counting
- Counter visualization via Handshake.Logic 'Monitor', Handheld.Gate 'Monitor' and Handshake.Logic 'Mobile Monitor'
- Reporting via Handshake.Logic 'Reporter'
- Sending of counter information via Handshake.Logic 'Messaging Service'
- Data basis for various analyses

Applications

- Person counting in specific areas
- Monitoring of maximum number of persons allowed in specified areas
- Stadia
- Arenas
- Fairs and exhibitions
- Shops
- Leisure parks
- Zoos
- etc.

Technical Specifications

System requirements	Handshake.Logic V9.01 or higher LAN connection to stereo cameras
Hardware used	SenSource stereo camera (indoor/outdoor version available) Up to 4 stereo cameras are supported per virtual camera controller. The number of the controllers depends on the license.
Power supply	SenSource stereo camera: Ethernet (PoE)
Operating temperature range	0°C to 45°C
Necessary light conditions	200 Lux over the whole area
Configuration	Web tool for stereo camera configuration/calibration
Installation	Overhead
Installation height	approx. 2.4 m to 4.2 m
Detection footprint	approx. 1.6 m × 1.2 m to 5.5 m × 4.0 m (width × depth)
System Performance	The on-site situation, environment conditions and user behaviour have an impact on the product performance/accuracy.
