Operator.Services 'sweb.Control 2.0'

Vision and insight

Get access to all relevant operational data in real time – anytime, anywhere. Use sweb.Control 2.0, the new web-based solution for simple, centralized operation and control of your systems.

Always well informed

No matter when and where, by centralizing you gain access to detailed information in real time about individual devices or several facilities. You do not need any additional software, just Internet access.

Straightforward user interface

The intuitive sweb.Control 2.0 user interface provides for easy operation and a reduction of the work effort at the same time.

Optimized process management

If several operator activities are pending, the system automatically performs a prioritization of these tasks. In addition, you can control access permissions through the use of individual user groups.

Increase support, minimize downtime

Help your customers quickly and efficiently, without having to be on site. In the event of a disturbance, your system is back online more quickly.
