skiosk® Lite 'Vending'

Interactive cashless digital kiosk

The cashless ticket vending machine combines all the benefits of modern ticketing and makes purchasing tickets child's play. Relieve your cashiers and reduce the waiting times for ticket purchases or Pick-Ups. Thanks to innovative and well thought-out functions, skiosk Lite 'Vending' will also be effectively integrated into your daily business as an advertising and information kiosk.

Information center and advertising miracle

The big 18,5 inch touch display variant in HD resolution with its split-screen function acts both as an advertising miracle as well as an information center. It constantly sends relevant marketing messages either in full-screen or in operating split-screen mode. This attractive advertising space can also be sold to business partners to generate additional income.

Optimal expansion

The skiosk Lite device variants complement frequented ticket issuing offices perfectly and are ideal for expanding your sales points, even at locations never thought before. This allows round-the-clock ticket sales and information and supports your cashiers at peak times. So there is more time for even better customer service.

Cashless transformation: easy, fast, secure

It's not only the payment and operative handling of bills and coins that is simplified with the cashless digital kiosk. RFID-based articles can be issued on keytix (fanfold) or keycard (stacker), while barcode-tickets can be produced cost efficiently on fanfold tickets or receipt paper.

Extensive system networking

Control and billing at the touch of a button: Thanks to central monitoring, you can also see from a distance whether support or maintenance is required at the digital kiosk. Comprehensive reports can be provided through system networking.
