

## Smart.Cash 'Vending'

Ski ticket sales  
made easy

Relieve your cashiers and reduce the waiting times for lift ticket purchases. Using the brand new ticket vending machine Smart.Cash your guests can purchase ski passes easily – and around the clock. For your guests the Smart.Cash scores big especially thanks to its simple and intuitive operation via touchscreen. Payment can be made by card or cash.

### Relieve personnel

Reduce the crowds at your cash desks and therefore relieve your staff. Using the vending machines, your customers can buy ski tickets at any time. In addition, tickets already reserved online can be picked and cards can be recharged – quickly and conveniently, and entirely without waiting times.

### Modern advertising possibilities

Take advantage of the large monitor for your marketing and advertise your own business and collaborations or sell the advertising space, thereby generating additional income. The advertisements are designed so that they always allow for uninterrupted ticket sales.

### Optimal user friendliness

The large touchscreen makes buying tickets an unforgettable experience! The height of the user interface adjusts to match the customer's needs with just a keystroke. Payment can be made as the customer wishes by card or in cash, including change in the form of banknotes. A motion detector automates the switch from advertising to operating mode.

### Centralized monitoring

Monitor and control the machines centrally from your office, for example, to conveniently turn them on and off. If despite the large capacity the change or the tickets are running low, the machine informs you automatically. You also support your guests via intercom right from your place of work.
