sweb[®] eTicket

Your digital gateway
for fast, effortless
ticketing

Take advantage of the digital world and the use of smartphones as a data carrier. The service generates and sends e-tickets, the accompanying app manages and displays them. SKIDATA coordinates the integration of the various Wallets and ticket technologies as well as the secure delivery of the e-tickets for you.

Interactive, updatable, secure

The interactive e-tickets can include additional information and Internet links, and can even be updated after sending. The authentication mechanism ensures that only the buyer can download the e-ticket.

Ticket and advertising space in one

Sending e-tickets saves you time and money. What's more, you can bring sponsors and partners into the game by turning the e-ticket into an advertising space for an additional source of income.

A service 'plus' for your customers

Your customers receive the interactive e-tickets directly on their smartphones and therefore always have them on hand. Equally practical - the event details can be imported into their calendars and, when the time comes, they can easily navigate to the venue using their e-ticket.

For the personal touch

Customize the design of both tickets and ticket categories. Add your corporate logo and colors to put the final touches on your e-tickets - making them look great and strengthening the brand identity of your business.
