

Summit.Logic Super Data Central

Administrate centrally,
manage efficiently

Within the Super Data Central, all your information converges and can be administrated both comfortably and efficiently. Automated processes save you time and, thanks to professional hosting by SKIDATA, you can count on reliable, certified data management.

Transparency and security

The data center lets you access centrally managed customer accounts from every online workstation. So you can quickly see the current status. This provides both security and a factual basis for objectively dealing with customers – especially important when handling complaints.

Professional pool management

Configuration as well as adjustments can be completed centrally and made available to all applications in real time. When partnering with other ski resorts, this means creating the optimal conditions for timely and efficient cooperation.

Centralized customer data

Centralization avoids incorrect records and duplicates and brings together the data from all your customers' transactions. You get an overview of the customer behavior within the entire ski pool. The perfect basis for customer service optimization.

Investment friendly and secure

SKIDATA is your partner for a robust IT infrastructure. With a Super DAC hosted by SKIDATA, you can save on acquisition and personnel costs – letting you focus on your core business.
