Robust and reliable
RFID wristband

The waterproof, reusable RFID wristband gives your guests comfortable, hands-free access and gives you profitable business opportunities.

Wide range of applications

The wristband is well-suited for access authorizations as well as complementary services - for example, entrance to an amusement park, use of a locker, or to enter the parking area. Take advantage of opportunities to expand your offer portfolio and increase profits by cooperating with business partners.

See the difference

Easily distinguish between various categories of people such as children and youth, VIPs, etc. through the use of different colors. This makes each authorization type recognizable at a glance - which is especially helpful for you and your staff during periods of high activity.

Comfort and security

The reading of the wristband is contactless. This makes access extremely comfortable for your guests, and also saves time thanks to faster throughput. Security features protect authorizations and data saved on the card from tampering and cloning.

Customizable design

Personalize the reusable wristband in your company design. This visually ensures a clear distinction. The wristband disc surface can be printed once in up to four colors and is laminated to protect it from abrasion.
