

Power.Cash 'Accessible'

The premium payment machine with social responsibility.

Comfortable operation and payment while sitting or standing. The Power.Cash 'Accessible' is the premium product among the SKIDATA parking payment machines in the disabled-friendly version. The touchscreen provides the automated payment machine with a simple user interface and its functionality can be expanded easily. Technically, it offers all the functional options and features of the Power.Cash.

Standing or sitting

The new barrier-free automated payment machine provides all necessary functions according to the international standard; at a height between 80 and 120 cm. All the controls are for everyone, whether sitting or standing, easily accessible – including the change.

Touchscreen

With the standard touchscreen you not only provide a modern interface, but can also take advantage of a simple expansion of the functionality. New services and offers can be easily integrated without the installation of new components.

Professional ticketing

Whether customers want to pay by cash or card, or use one of a variety of data carrier formats, Power.Cash is well prepared for today and the coming years. It processes barcode, magnetic, and RFID technologies, offers Print@Home, and is prepared for NFC solutions.

Service made easy

Maximum success with minimum effort. Large ticket capacity, a large coin system, double ticket feeding with automatic switchover, a self-refilling coin system, and the use of a banknote recycler will help to make the operation even easier for you.
