

Sales.Services 'sweb.Contract B2B'

Office work is mostly a thing of the past. Using the Internet service, sweb.Contract B2B, customers who have multiple vehicles can manage their parking permissions themselves. A win-win situation for everybody involved.

Save time and reduce costs

- Hand over tasks and responsibility to your corporate clients. They can manage their users' parking spaces, for example employee parking, themselves.
- This element of self-management regarding parking permits will save you both time and human resources.

Manage parking anywhere, anytime

- The sweb.Contract service can be easily installed and doesn't require any local programs.
- It is available anywhere, anytime – standard Internet access is sufficient.

The ideal solution for business parks

- As a parking facility operator, you only need to define the maximum number of vehicles that may be parked per B2B customer at any one time. Nevertheless, any number of parking authorizations can be issued.
- If the maximum number of vehicles per customer is reached, any further vehicles entering the parking facility may only gain access as short-term parkers. This generates additional business.

Impressive customer convenience

- The parking space management is achieved via a simple, clear, step-by-step process, such as those known from hotel booking platforms.
- An extensive training of the users is not necessary.
